

We have solar power in our community

helping Edinburgh become a greener city

Edinburgh Community Solar Cooperative, supported by Energy4All, has developed this exciting project for Edinburgh.

We have installed solar PV arrays, owned by the Coop, on 24 public buildings around the city. These are schools, community centres and leisure centres.

This project has been funded by people, mainly Edinburgh citizens, buying shares in our coop.

The benefits of the coop include:

- helping Edinburgh reduce carbon emissions
- generating clean, cheaper electricity for our host buildings
- over time, creating a Community Benefit Fund
- giving about 5% interest return on investments to our share holders
